# Numetrics Adds New Executive to Team

**Cupertino, Calif., - May 27, 2008** — Numetrics Management Systems Inc, the leading provider of predictive IC project planning and schedule risk analysis tools to the semiconductor industry, today announced that Jerry Rau has joined the company as vice president of business development & sales reporting to Ronald E. Collett, Numetrics' president and CEO. Jerry brings 25 years experience across a broad cross section of the semiconductor industry, including sales, product management, business development, design automation and process development, to Numetrics.

"Jerry's unique background as an engineer and program manager at LSI Logic and AMD and as a sales and marketing executive at Synopsys gives him a deep understanding of the risks that managers face in today's high stakes game of starting new IC projects," said Ron Collett. "We are excited to have such a well-respected industry veteran join us as the company continues to grow."

Jerry Rau served in a variety of sales executive and product management roles at Synopsys, covering diverse regions including Asia and Europe, and products including EDA software applications, IP building blocks, professional services, as well as several internal startups. He joined Synopsys as product manager for v1.2 of the design paradigm shifting Design Compiler synthesis product and was part of the management team that took Synopsys public in 1992.

Prior to that, his product teams at LSI Logic created breakthrough ASIC and Embedded Array products which altered the electronics landscape during the late 1980's by dramatically increasing density while reducing development time. He started his career with a process engineering role at Advanced Micro Devices where he focused on non-volatile EPROM and E2PROM memory technology. Jerry earned a MS Eng degree from Stanford University and a BS Eng degree from M.I.T.

### **About Numetrics Management Systems, Inc.**

Numetrics provides a suite of software tools specifically tailored to the unique needs of the R&D organizations in semiconductor companies. The enterprise resource planning (ERP) software enables unprecedented predictability of chip development schedules, reliably measures project schedule risk and benchmarks product development performance against the industry's best-in-class. The company is headquartered at 20863 Stevens Creek Boulevard, Suite 510, Cupertino, CA
